VLSI Physical Design: From Graph Partitioning to Timing Closure-Andrew B. Kahng 2011-01-27 Design and optimization of integrated circuits are essential to the creation of

new semiconductor chips, and physical optimizations are becoming more prominent as a result of semiconductor scaling. Modern chip design has become so complex that it is largely performed by specialized software, which is frequently updated to address advances in semiconductor technologies and increased problem complexities. A user of such software needs a high-level understanding of the underlying mathematical models and algorithms. On the other hand, a developer of such software must have a keen understanding of computer science aspects, including algorithmic performance bottlenecks and how various algorithms operate and interact. "VLSI Physical Design: From Graph Partitioning to Timing Closure" introduces and compares algorithms that are used during the physical design phase of integrated-circuit design, wherein a geometric chip layout is produced starting from an abstract circuit design. The emphasis is on essential and fundamental techniques, ranging from hypergraph partitioning and circuit placement to timing closure.

A New Practical Primer of Literary Chinese-

Paul Rouzer 2020-03-23 "Forty lessons designed to introduce beginning students to the basic patterns and structures of Classical Chinese are taken from a number of pre-Han and Han texts selected to give students a grounding in exemplary Classical Chinese style. Two additional lessons use texts from later periods to help students appreciate the changes in written Chinese over the centuries. Each lesson consists of a text, a vocabulary list featuring discussions of meaning and usage, explanations of grammar, and explications of difficult passages. The standard modern Chinese, Japanese, and Korean pronunciations are indicated for each character, making this a learning tool for native speakers of those languages as well. Appendices give suggestions for further readings, review common and significant words, explain the radical system, and provide Japanese kanbun readings for all the selections. Glossaries of all vocabulary items and pronunciation indexes for modern Chinese and

Korean are also included."

At last—there is a truly effective and enjoyable way to learn Chinese characters! This book helps students to learn and remember both the meanings and the pronunciations of over 800 characters. This otherwise daunting task is made easier by the use of techniques based on the psychology of learning and memory. key principles include the use of visual imagery, the visualization of short "stories," and the systematic building up of more complicated characters from basic building blocks. All characters are simplified (as in mainland China) but traditional characters are also given, when available. Key features: Specially designed pictures and stories are used in a structured way to make the learning process more enjoyable and effective, reducing the need for rote learning to the absolute minimum. The emphasis throughout is on learning and remembering the meanings and pronunciations of the characters. Tips are also included on learning techniques and how to avoid common problems. Characters are introduced in a logical sequence, which also gives priority to learning the most common characters first. Modern simplified characters are used, with pronunciations given in pinyin. Key information is given for each character, including radical, stroke-count, traditional form, compounds, and guidance on writing the character. This is a practical guide with a clear, concise and appealing layout, and it is well-indexed with easy look-up methods. Mirroring the Past-On Cho Ng 2005-01-01
China is known for its deep veneration of history. Far more than a record of the past, history to the Chinese is the magister vitae (teacher of life): the storehouse of moral lessons and bureaucratic precedents. *Mirroring the Past* presents a comprehensive history of traditional Chinese historiography from antiquity to the mid-qing period. Organized chronologically, the book traces the development of historical thinking and writing in Imperial China, beginning with the earliest forms of historical consciousness and ending with adumbrations of the fundamentally different views engendered by mid-nineteenth-century encounters with the West. The historiography of each era is explored on two levels: first, the gathering of material and the writing and production of narratives to describe

past events; second, the thinking and reflecting on meanings and patterns of the past. Significantly, the book embeds within this chronological structure integrated views of Chinese historiography, bringing to light the purposive, didactic, and normative uses of the past. authors lay bare the ingenious ways in which Chinese scholars extracted truth from events and reveal how schemas and philosophies of history were constructed and espoused. They highlight the dynamic nature of Chinese historiography, revealing that historical works mapped the contours of Chinese civilization not for the sake of understanding history as disembodied and theoretical learning, but for the pragmatic purpose of guiding the world by mirroring the past in all its splendor and squalor.
