Midnight Picasso-Leslie Cameron 2016-06-23 Fraud is like sex : so much better if you take it slowly. Corinne Bruckmann lives by fraud. She arrives on Gran Canaria with the Midnight painting that she claims to be a sequel to the Guernica masterpiece in Madrid. In her story, Picasso gave the canvas to her German grandfather, back in 1937. Mike Forrest has been hired to find these answers: (a) Is it really a Picasso? (b) Is it really hers to sell? (c) Is this another scam? - OR - (d) Is she telling the truth? Word of the Midnight Picasso spreads like wildfire. Dealers and criminals swarm to Gran Canaria, all with one idea: to own the priceless new Picasso - by either buying it, stealing it... or killing for it. Mike Forrest is the 'fall-guy' in this hurricane of women, sex and violence... Many died at Guernica - and more will die before Mike can find the truth....

The Value of Arts and Culture for Regional Development

Lisbeth Lindeborg 2013-08-21 In this new volume, 28 Scandinavian researchers and others who are active in arts and culture seek to answer the questions: What has been the effect of

regional and local investment in arts and culture? And what positive and negative experiences have there been? This book describes and analyzes the extent to which cultural investments at local and regional levels have stimulated development and led to essential processes of change for the community in general. Of special interest is how different places manage to "turn the tide". What do their development processes involve? Which ways and means do they use to go forward in order to change their paths and start anew? These are just a few of the important questions addressed in this book. One of the most important findings is that while you can never transfer the successful renewal of one place to another like a blueprint, certain common patterns in the cultural processes are discernible. The contributors to this book show the breadth of theoretical tools that can be used to increase awareness of the significance of culture for regional development. Throughout the book readers will find a multitude of theoretical concepts, from

entrepreneurship theory, organizational institutionalism and cultural economy, to cultural planning and art management. This book will appeal to scholars and practitioners of urban and regional studies, and cultural and creative economics.

Intelligent Projects Using Python-Santanu Pattanayak

2019-01-31 Implement machine learning and deep learning methodologies to

build smart, cognitive AI projects using Python Key Features A go-to guide to help you master AI algorithms and concepts 8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillance Use TensorFlow, Keras, and other Python libraries to implement smart AI applications Book Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later

you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. What you will learn Build an intelligent machine translation system using seq-2-seq neural translation machines Create AI applications using GAN and deploy smart mobile apps using TensorFlow Translate videos into text using CNN and RNN Implement smart AI Chatbots, and integrate and extend them in several domains Create smart reinforcement, learning-based applications using Q-Learning

Break and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists, machine learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. If you want to build real-life smart systems to play a crucial role in every complex domain, then this book is what you need. Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book

Nanopackaging-James E. Morris 2018-09-22 This book presents a comprehensive overview of nanoscale electronics and systems packaging, and covers nanoscale structures, nanoelectronics packaging, nanowire applications in packaging, and offers a roadmap for future trends. Composite materials are studied for high-k dielectrics, resistors and inductors, electrically conductive adhesives, conductive "inks," underfill fillers, and solder enhancement. The book is intended for industrial and academic researchers, industrial electronics packaging engineers who need to keep abreast of progress in their field, and others with interests in nanotechnology. It surveys the application of nanotechnologies to electronics packaging, as represented by current research across the field.

Problems-Ozgur Ergul
2014-04-22 The Multilevel Fast Multipole Algorithm (MLFMA) for Solving Large-Scale Computational Electromagnetic Problems provides a detailed and instructional overview of implementing MLFMA. The book: Presents a comprehensive treatment of the MLFMA algorithm, including basic linear algebra concepts, recent developments on the parallel computation, and a number of application examples Covers solutions of electromagnetic problems involving dielectric objects and perfectly-conducting objects Discusses applications including scattering from airborne targets, scattering from red blood cells, radiation from antennas and arrays, metamaterials etc. Is written by authors who have more than 25 years experience on the development and implementation of MLFMA The book will be useful for post-graduate students, researchers, and academics, studying in the areas of computational electromagnetics, numerical

analysis, and computer science, and who would like to implement and develop rigorous simulation environments based on MLFMA.
