Cert Basic Training Participant Manual-Homeland Security Dept., Federal Emergency Management Agency 2018 CERT (Community Emergency Response Team) is a critical program in the effort to engage everyone in America in making their communities safer, more prepared, and more resilient when incidents occur. Community-based preparedness planning allows us all to prepare for and respond to anticipated disruptions and potential hazards following a disaster. As individuals, we can prepare our homes and families to cope during that critical period. Through pre-event planning, neighborhoods and worksites can also work together to help reduce injuries, loss of lives, and property damage. Neighborhood preparedness will enhance the ability of individuals and neighborhoods to reduce their emergency needs and to manage their existing resources until professional assistance becomes available. Studies of behavior following disasters have shown that groups working together in the disaster period perform more effectively if there has been prior planning and training for disaster response. These studies also show that organized grassroots efforts may be more successful if they are woven into the social and political fabric of the community-- neighborhood associations, schools, workplaces, places of worship, and other existing organizations. Effective response therefore requires comprehensive planning and coordination of all who will be involved--government, volunteer groups, private businesses, schools, and community organizations. With training and information, individuals and community groups can be prepared to serve as a crucial resource capable of performing many of the emergency functions needed in the immediate post-disaster period. The CERT Program is designed to train individuals to be assets to help communities prepare for effective disaster response. Developing and Maintaining Emergency Operations Plans: Comprehensive Preparedness Guide (CPG) 101, Version 2.0-U. s. Department of Homeland Security 2013-01-23 Comprehensive Preparedness Guide (CPG) 101 provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOP). CPG 101 shows that EOPs are connected to planning efforts in the areas of prevention, protection, response, recovery, and mitigation. Version 2.0 of this Guide expands on these fundamentals and encourages emergency and homeland security managers to engage the whole community in addressing all risks that might impact their jurisdictions. While CPG 101 maintains its link to previous guidance, it also reflects the reality of the current operational planning environment. This Guide integrates key concepts from national preparedness policies and doctrines, as well as lessons learned from disasters, major incidents, national assessments, and grant programs. CPG 101 provides methods for planners to: Conduct community-based planning that engages the whole community by using a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process; Ensure plans are developed through an analysis of risk; Identify operational assumptions and resource demands; Prioritize plans and planning efforts to support their seamless transition from development to execution for any threat or hazard; Integrate and synchronize efforts across all levels of government. CPG 101 incorporates the following concepts from operational planning research and day-to-day experience: The process of planning is just as important as the resulting document; Plans are not scripts followed to the letter, but are flexible and adaptable to the actual situation; Effective plans convey the goals and objectives of the intended operation and the actions needed to achieve them. Successful operations occur when organizations know their roles, understand how they fit into the overall plan, and are able to execute the plan. Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis, determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to

achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain. Planners achieve unity of purpose through coordination and integration of plans across all levels of government, nongovernmental organizations, the private sector, and individuals and families. This supports the fundamental principle that, in many situations, emergency management and homeland security operations start at the local level and expand to include Federal, state, territorial, tribal, regional, and private sector assets as the affected jurisdiction requires additional resources and capabilities. A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective, and makes plan maintenance easier.

Hazardous Materials Incidents-Steven M. DeLisi 2006 First responders who arrive on scene of a hazardous materials incident may be assigned to an engine, ladder truck, rescue, or ambulance with very little sophisticated HAZMAT equipment. Despite these limitations, their actions during the initial response will often set the stage for the success or failure of the entire event. Many incidents start out as minor “routine” events that suddenly escalate when something goes terribly wrong. Perhaps first responders did not anticipate the involvement of hazardous materials in a response to a rear-end collision involving two passenger vehicles, an EMS call at a residence for difficulty breathing, or a trash fire. That is until it was too late! First responders, despite their best intentions, can quickly become part of any hazardous materials problem. The results can be first responders who are killed or seriously injured, or those who suffer devastating illnesses years after exposure to a hazardous material. Even if you have hours of training on hazardous materials response, this book will provide every reader with... • Practical advice based on the real-life experiences of first responders • A one-stop source on topics such as atmospheric monitors and class B foam • Steps to managing “routine” incidents to prevent them from becoming disasters • Limitations of federal hazardous materials regulations you need to know • Real-world examples of first responders who won (or lost) the battle with hazardous materials First responders who arrive on scene of a hazardous materials incident may be assigned to an engine, ladder truck, rescue, or ambulance with very little sophisticated HAZMAT equipment. Instructor's Guide-Regina Phelps 2012-07-20 Exercises are a mainstay in the field of emergency management and business continuity planning. Although many organizations conduct exercises, and the organizers may be emergency management/business continuity subject matter experts, they do not excel in the discipline of designing and conducting the actual exercise - which means they simply don't get the best results out of their effort. This comprehensive and highly interactive course provides everything that an instructor needs to teach - and inspire - students to create great exercises. The course begins with a "silly little question": Why are we doing this? What seems like a simple query is actually one of the keys to get the most out of every exercise design. The course then peels back the mysteries of the design process with the goal of creating the best experience possible. Whether your students are developing simple tabletop exercises or working on a full-scale extravaganza that resembles a Hollywood movie, this course will provide you and them with gems of wisdom to make their exercises powerful and pack a punch. An internationally recognized expert in exercise design, Regina Phelps whispers her secrets into your ear week by week to ensure your course success.

Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities-U.S. National Institute For Occupational Safety and Health 1986-02 In the past decade, industry, government, and the general public have become increasingly aware of the need to respond to the hazardous waste problem, which has grown steadily over the past 40 years. In 1980, Congress passed the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)-the Superfund law-to provide for "liability, compensation, cleanup, and emergency response for hazardous substances released into the environment and the cleanup of inactive waste disposal sites." This manual is a guidance document for managers responsible for occupational safety and health programs at inactive hazardous waste sites. It assumes a basic knowledge of science and experience in occupational safety and health. It is the product of a four-agency committee (the National Institute for Occupational Safety and Health NIOSH, the Occupational Safety and Health Administration OSHA, the U.S. Coast Guard USCG, and the U.S. Environmental Protection Agency EPA) mandated by CERCLA section 301(f) to study the problem of protecting the safety and health of workers at hazardous waste sites, and by CERCLA section 111(c)(6) to develop a program to protect the health and safety of employees involved in response to hazardous substance releases, removals, or remedial actions.

Pandemic Influenza-Jeffrey R. Ryan 2008-08-01 The swine flu emergency needn't become a crisis. This critically acclaimed work provides public health officials, doctors, responders, and emergency planners with accurate current information that will help them understand the nature of an outbreak, assess risk, answer public concerns, and develop informed strategies. Devoid of sensationalism and agenda, this CRC Press resource provides all the information needed to understand pandemic influenzas including, avian, swine, and human variations and outlines the steps needed to develop and implement prevention, stabilization, and recovery efforts as needed at the local level. "... an amazing resource ... Dr. Ryan has assembled some of the best experts in the field to guide you in understanding the threat of pandemic influenza and how it can affect you and the people you are responsible for. ..." --From the foreword by Lynn A. Slepski, Captain, United States Public Health Service Make certain your response to Swine Flu is proactive and informed Edited by Jeffrey Ryan, Institute for Emergency Preparedness, this volume — Arms planners and responders with guidance from 13 leading experts Takes lessons from past pandemics Covers biological and clinical aspects of influenza Discusses pharmaceutical and non-pharmaceutical measures Details response actions related to communication, travel, and quarantine While the swine flu outbreak has impacted Mexico; influenza has no respect for boundaries and is already being felt up north. Despite warnings from the World Health Organization, our preparedness continues to lag. Part of the problem is that the real action must occur at the local level. Triage, care, and containment, along with maintenance of infrastructure, are functions that must be carried out by local planners and responders. The first section reviews the history of pandemics. The middle chapters examine the biology of a virus and clinical aspects of influenza. The final chapters examine international and federal programs and discuss response at the local level, including service continuation planning and fatality management.

Framework for a Public Health Emergency Operations Centre-World Health Organization 2015-12-15 The Framework for a Public Health Emergency Operations Centre (PHEOC framework) document is intended to be used by practitioners of public health; health policy makers; and authorities and agencies responsible for managing emergencies, incidents, or events where the health of populations is at risk. This document provides high-level methodical guidance for designing, developing, and strengthening of public health emergency operations centers. This interim document outlines the key concepts and essential requirements for developing and managing a public health EOC (PHEOC). The overall approach is generic and based on widely acknowledged elements of all-hazards emergency management. It provides an outline for developing and managing a PHEOC to achieve a goal-oriented response to public health emergencies and unity of effort among response agencies. The document will be revised as necessary. Practical guidance on specific aspects of the PHEOC framework will be developed and published separately. A public health emergency is here defined as an occurrence, or imminent threat, of an illness or health condition that poses a substantial risk of a significant number of human fatalities, injuries or permanent or long-term disability. Public health emergencies can result from a wide range of hazards and complex emergencies. Experience has shown that timely implementation of an EOC provides an essential platform for the effective management of public health emergencies. Public health emergencies involve increased incidence of illness, injury and/or death and require special measures to address increased morbidity, mortality and interruption of essential health services. For such emergencies, a multi-agency, multi-jurisdictional response is often required, working with the national disaster management organization. When normal resources and capacities are exceeded, support from outside the affected areas will also be required. External assistance could include national, cross-border, regional or international resources.
