### **Control and Prediction of Solid-State of Pharmaceuticals**-Rajni Miglani Bhardwaj

2016-02-02 This thesis investigates a range of experimental and computational approaches for the discovery of solid forms. Furthermore, we gain, as readers, a better understanding of the key factors underpinning solid-structure and diversity. A major part of this thesis highlights experimental work carried out on two structurally very similar compounds. Another important section involves looking at the influence of small changes in structure and substituents on solid-structure and diversity using computational tools including crystal structure prediction, PIXEL calculations, Xpac, Mercury and statistical modeling tools. In addition, the author presents a fast validated method for solid-state form screening using Raman microscopy on multi-well plates to explore the experimental crystallization space. This thesis illustrates an inexpensive, practical and accurate way to predict the crystallizability of organic compounds based on molecular

structure alone, and additionally highlights the molecular factors that inhibit or promote crystallization.

**The Craft and Science of Coffee-** Britta Folmer  
2016-12-16 The Craft and Science of Coffee  
follows the coffee plant from its origins in East  
Africa to its current role as a global product that  
influences millions of lives through sustainable  
development, economics, and consumer desire.  
For most, coffee is a beloved beverage. However,  
for some it is also an object of scientifically  
study, and for others it is approached as a craft,  
both building on skills and experience. By  
combining the research and insights of the  
scientific community and expertise of the crafts  
people, this unique book brings readers into a  
sustained and inclusive conversation, one where  
academic and industrial thought leaders, coffee  
farmers, and baristas are quoted, each informing  
and enriching each other. This unusual approach  
guides the reader on a journey from coffee

farmer to roaster, market analyst to barista, in a style that is both rigorous and experience based, universally relevant and personally engaging. From on-farming processes to consumer benefits, the reader is given a deeper appreciation and understanding of coffee's complexity and is invited to form their own educated opinions on the ever changing situation, including potential routes to further shape the coffee future in a responsible manner. Presents a novel synthesis of coffee research and real-world experience that aids understanding, appreciation, and potential action. Includes contributions from a multitude of experts who address complex subjects with a conversational approach. Provides expert discourse on the coffee value chain, from agricultural and production practices, sustainability, post-harvest processing, and quality aspects to the economic analysis of the consumer value proposition. Engages with the key challenges of future coffee production and potential solutions.

**Making Gay Okay**-Robert R. Reilly 2015-09-05  
Why are Americans being forced to consider homosexual acts as morally acceptable? Why has the US Supreme Court discovered a constitutional right to same-sex "marriage", which until a decade ago, was unheard of in the history of Western or any other civilization? Where has the "gay rights" movement come from, and how has it so easily conquered America? The answers are in the dynamics of the rationalization of sexual misbehavior. The power of rationalization—the means by which one mentally transforms wrong into right—drives the gay rights movement, gives it its revolutionary character, and makes its advocates indefatigable. The homosexual cause moved naturally from a plea for tolerance to cultural conquest because the security of its rationalization requires universal acceptance. In other words, we all must say that the bad is good. At stake in the

rationalization of homosexual behavior is reality itself, which is why it will have consequences that reach far beyond the issue at hand. Already America's major institutions have been transformed—its courts, its schools, its military, its civic institutions, and even its diplomacy. The further institutionalization of homosexuality will mean the triumph of force over reason, thus undermining the very foundations of the American Republic.

**Civil Engineer's Reference Book**-L S Blake 2013-10-22 Civil Engineer's Reference Book,

Fourth Edition provides civil engineers with reports on design and construction practices in the UK and overseas. It gives a concise presentation of theory and practice in the many branches of a civil engineer's profession and it enables them to study a subject in greater depth. The book discusses some improvements in earlier practices, for example in surveying, geotechnics, water management, project management, underwater working, and the control and use of materials. Other changes covered are from the evolving needs of clients for almost all forms of construction, maintenance and repair. Another major change is the introduction of new national and Euro-codes based on limit state design, covering most aspects of structural engineering. The fourth edition incorporates these advances and, at the same time, gives greater prominence to the special problems relating to work overseas, with differing client requirements and climatic conditions. Chapters 1 to 10 provide engineers, at all levels of development, with 'lecture notes' on the basic theories of civil engineering. Chapters 11 to 44 cover the

practice of design and construction in many of the fields of civil engineering. Civil engineers, architects, lawyers, mechanical engineers, insurers, clients, and students of civil engineering will find benefit in the use of this text.

**Imagining Holiness**-Justin Jaron Lewis 2009  
Hasidic tales are often read as charming expressions of Jewish spirituality. This title offers a radical reappraisal of how we think of Hasidic tales, calling into question received notions of authenticity. It focuses on the neglected Hasidic literature of the early 20th century - primarily the work of Israel Berger and Abraham Hayim Michelson.
