Marsupial Genetics and Genomics- Paul D. Waters 2010-08-05 Marsupials belong to the Class Mammalia, sharing some features with other mammals, yet they also possess many unique features. It is their differences from the more traditionally studied mammals, such as mice and humans, that is of greatest value to comparative studies. Sequencing of genomes from two distantly related marsupials, the short grey-tailed opossum from South America and the Australian tamar wallaby, has launched marsupials into the genomics era and accelerated the rate of progress in marsupial research. With the current worldwide concern for the plight of the endangered Tasmanian devil, marsupial genetics and genomics research is even more important than ever if this species is to be saved from extinction. This volume recounts some of the history of research in this field and highlights the most recent advances in the many different areas of marsupial genetics and genomics research.

The Tractor in the Haystack-Scott Garvey For the aficionado of farm equipment, or the scion of an old farming family nostalgic for the old days, or the grown-up boy who still loves a classic piece of old-time machinery, the vintage tractor can be a thrilling find like no other. This book tells dozens of stories of such discoveries, of the treasured old tractor parked in a shed since 1927, of the pristine model unearthed at an estate sale, of the broken-down old beauty stashed in a barn where generations of children have made their secret hideaways. These are the classic tractors that are often as hard to find as a needle in a haystack—but far more fun to discover, as all of these delightful stories make abundantly clear.

King of the Norfolk Poachers, The: His Life and Times-Stuart Gibbard 2020-05-12 The little grey Fergie is Britain's best-loved tractor, the light user-friendly machine that finally replaced the horse on farms. This highly illustrated account covers the full history of Harry Ferguson's tractor products from his pioneering work before the 1930s to the merger with Massey in 1957. The author has had access to fresh archive material and has interviewed many of the surviving men who were associated with Ferguson. The appeal of the Fergie lay in its lightness and utility, and also in the system of mechanized farming of which it was a part. Throughout the book, reference is made to the implements which lay at the heart of the system. Stuart Gibbard has won "Tractor and Machinery" magazine's award for the best British tractor book five years running.

The Big Book of Massey Tractors-Robert N. Pripps 2006 This is the first full-scale history of one of the largest farm tractor manufacturers of all time, peppered with pictures of Massey-Harris, Ferguson, and Massey Ferguson's historic models, collectibles, sales memorabilia, and advertisements from old farm magazines. The Big Book of Massey Tractors tells the story of the mergers and machines that formed Massey Ferguson over several decades, and—because these machines dominated Canadian farms for almost a century—in many ways it also tells the story of Canadian agriculture. Robert Pripps, a longtime tractor aficionado, describes Massey Ferguson's battle with Ford over dominance of the farm tractor industry—a battle the company eventually won, remarkably enough, in view of its initial abject market failure with tractors. From the company's beginnings in 1891, to its 1953 merger with the Ferguson tractor company, to its current ownership by Allis-Gleaner Company (AGCO), Masseys have played a large role in our agricultural history. The Big Book of Massey Tractors celebrates that role and showcases the machines that have helped turn the earth for over a hundred years.

Trans(in)fusion-Ranjan Ghosh 2020-10-08 Trans(in)fusion is a highly original book that tries to radicalize our ways of ‘critical thinking’ across disciplines. The book, refreshingly, brings into play critical philosophy, literary criticism, studies in mathematics, physics, chemistry and developmental biology, and various other disciplines and epistemes to set up a tenure and tenor of ‘critical thinking’. The book is an exclusive intervention in how thinking across traditions and systems of thought can generate distinct interpretive experiences. It questions, in a unique transcultural and transversal bind, our ways of hermeneutic and literary-cultural thinking. Trans(in)fusion resets the dialectics between text and theory.

Ferguson Advertising-John Farnworth 2015-01-01 Harry Ferguson's contribution to agriculture was enormous. His Ferguson System took farm mechanisation a giant leap forward and was universally copied by other manufacturers. Indeed it remains a basic feature of tractor and implement design worldwide today. He was also an innovator in offering in addition to his tractor a complete range of implements designed specifically for it, from ploughs to post-hole borer, something no manufacturer had done before, and a strategy that greatly increased sales of Ferguson products. He really knew how to sell, and in addition he outdid all his competitors in the promotion and marketing of the Ferguson range. This book brings together a wide selection of Ferguson advertisements published in journals and magazines in both the UK and the USA, from the days of the Ferguson Brown tractor through the Ford Ferguson, TE20, TO20, TO30, TO35 and Ferguson FE35 to the Ferguson 40, the last of the line prior to the introduction of the Massey-Ferguson MF35. Implements and farm equipment made for Fergusons are also covered. Author John Farnworth is well known through his previous publications, and here he studies a subject that has a broad appeal to tractor enthusiasts and to the army of collectors of Ferguson memorabilia, while at the same time providing an overview of the life and times of the Ferguson brand. More than 000 advertisements are reproduced in the book.

Rhizomania-Enrico Biancardi 2016-09-20 The knowledge of ecology and epidemiology of rhizomania is particularly useful to understand the means and practices able to limit or avoid its further diffusion. Some promising methods of biological control using coexisting and non-pathogenic organisms could potentially help improve the action of the not completely effective genetic resistances. This integrated protection would be valuable, especially in the even more frequent development of resistance-breaking strains in the BNYVV, where the known types of resistance, alone or in combination, seem to have lost part of their original ability to protect the crop. Therefore, further efforts will be needed to discover new traits likely still present in the wild species of the genus Beta. The availability of large collections of germplasm stored in the International Beta gene-banks should ensure the enhanced efficiency of genetic resistance by means of conventional and marker-assisted selection methods. Some almost immune transgenic varieties seem already to be waiting for release where and when it will be possible. The introduction chapter describes briefly the sugar beet crop, the more common diseases, and the damage caused by rhizomania. The following chapters discuss biological properties of the causal virus, BNYVV, and its vector, Polomyxa betae, and their interactions with the environment and the host-plant. In particular, the great advances in research of the molecular biology of BNYVV should be noteworthy, which have been established by a wide range of the most modern methods. Recent work focused on the genetic diversity and evolution of BNYVV is moving forward our understanding of the dramatic worldwide epidemics of rhizomania. Newly developed molecular techniques also lead to practical applications, such as quantification of inoculum in ecological and epidemiological research.
