The Political Economy Of South Africa-Ben Fine 2018-02-12

Democratization in South Africa has been accompanied by continuing and even deepening economic inequalities. Rather than proposing a blueprint for a more equitable economic system, this book presents the results and implications of wide-ranging research on the history and current dynamics of the South African economy over the past fifty years. The authors analyze a range of strategic economic trajectories, linking these to the shifting balance of economic and political power, and they set the parameters within which the economic and political debates are conducted. }The acclaim with which democratization in South Africa has been greeted has been tempered by the recognition that there are at the same time continuing and even deepening economic inequalities. This is more disturbing given the extreme economic disparity experienced by much of the black population, the retreat from commitments to public ownership enshrined in the Freedom Charter, the unambiguous safeguarding of private capital, and the obstacles placed in the way of progressive economic policies by business interests and the entrenched apartheid-era bureaucracy. Rather than proposing a blueprint for a more equitable economic system, this book presents the results and implications of detailed and wide-ranging research on both the history and current dynamics of the South African economy, from the Second World War to the present. The authors analyze a range of strategic economic trajectories, linking these to the shifting balance of economic and political power in South Africa. But their approach is not prescriptive; instead they set the parameters within which the economic and political debates are conducted. They also discuss the theoretical arguments involved in the

propositions that they and others have put forward. The books value is enhanced by the comprehensiveness of the data presented, and each chapter is self-contained so that particular topics can be studied separately.

Construction Management-Eugenio Pellicer 2013-10-09 The management of construction projects is a wide ranging and challenging discipline in an increasingly international industry, facing continual challenges and demands for improvements in safety, in quality and cost control, and in the avoidance of contractual disputes. Construction Management grew out of a Leonardo da Vinci project to develop a series of Common Learning Outcomes for European Managers in Construction. Financed by the European Union, the project aimed to develop a library of basic materials for developing construction management skills for use in a pan-European context. Focused exclusively on the management of the construction phase of a building project from the contractor's point of view, Construction Management covers the complete range of topics of which mastery is required by the construction management professional for the effective delivery of new construction projects. With the continued internationalisation of the construction industry, Construction Management will be required reading for undergraduate and postgraduate students across Europe.

Caspian Energy Politics-Indra Overland 2010-01-21 Caspian Energy Politics analyses the role of oil and gas in the development of the three main petroleum exporters in the Caspian region - Azerbaijan, Kazakhstan and Turkmenistan - and how energy resources influence interactions with semi-authoritarian Russia and China. Due to volatile commodity prices and competition for the resources in and around the Caspian Sea, the governments of these petroleum-exporters face a series of difficult decisions. These governments have sought to balance short-term incentives to spend oil revenues as a means to maintain power against the need for a long-term strategy for managing these assets, choices which have further implications for how these countries align themselves internationally. By illuminating important linkages between domestic and international dynamics in these states, the book provides a fresh perspective on energy politics and the impact of petroleum on the development of the Caspian petroleum producers. Expert contributors from Central Asia and the South Caucasus and international scholars provide context-specific insights into the incentives affecting decision-makers that can provide a foundation for strategies to help the countries in the region overcome the negative effects of reliance on oil and gas. As such, the book will be a valuable tool for business actors seeking to understand the role of Chinese and Russian companies in the region, as well as local and international policymakers and non-governmental organisations.
