Sealab-Ben Hellwarth 2012-01-10 Sealab is the underwater Right Stuff: the compelling story of how a US Navy program sought to develop the marine equivalent of the space station—and forever changed man's relationship to the sea. While NASA was trying to put a man on the moon, the US Navy launched a series of daring experiments to prove that divers could live and work from a sea-floor base. When the first underwater "habitat" called Sealab was tested in the early 1960s, conventional dives had strict depth limits and lasted for only minutes, not the hours and even days that the visionaries behind Sealab wanted to achieve—for purposes of exploration, scientific research, and to recover submarines and aircraft that had sunk along the continental shelf. The unlikely father of Sealab, George Bond, was a colorful former country doctor who joined the Navy later in life and became obsessed with these unanswered questions: How long can a diver stay underwater? How deep can a diver go? Sealab never received the attention it deserved, yet the program inspired explorers like Jacques Cousteau, broke age-old depth barriers, and revolutionized deep-sea diving by demonstrating that living on the seabed was not science fiction. Today divers on commercial oil rigs and Navy divers engaged in classified missions rely on methods pioneered during Sealab. Sealab is a true story of heroism and discovery: men unafraid to test the limits of physical endurance to conquer a hostile undersea frontier. It is also a story of frustration and a government unwilling to take the same risks underwater that it did in space. Ben Hellwarth, a veteran journalist, interviewed many surviving participants from the three Sealab experiments and conducted extensive documentary research to write the first comprehensive account of one of the most important and least known experiments in US history.

Conceptual Foundations of Social Research Methods-David Baronov 2015-10-23 One of the common frustrations for students trying to make sense of the various debates and concepts that inform contemporary educational and social science research methods such as structuralism, postpositivism, hermeneutics, and postmodernism is that most books introducing these topics are written at a level that assumes the reader comes to this material with a basic grasp of the underlying ideas. Too often, fundamental concepts and theories are presented without adequate preparation and without providing practical examples to illustrate key elements. When the first edition of "Conceptual Foundations of Social Research Methods" was published, it represented a sharp contrast with these other approaches and received much praise. In this revised and expanded second edition, David Baronov further develops his critically acclaimed treatment of the core conceptual tools of social research informing education and the social sciences, updating his discussion of the current literature, and adding a new chapter that explores the role of pragmatism. Times Past in Korea-Martin Uden 2012-10-12 In earlier times, for the Chinese, Korea was 'the country of courteous people from the east', and for westerners 'the land of the morning calm' or 'hermit kingdom'. In this fascinating collection of writings on times past in Korea the author helps to lift the veil on this once closed country, providing the reader with a wide selection of first-hand accounts by travellers who 'discovered' Korea - some as snapshots by those passing through, others more detailed evaluations of Korean culture and everyday life by those who spent time there. The collection covers a period of over 400 years - from Hendrik Hamel's journal of the 1600s to early 20th century records, such as Roy C. Andrew's 1918 published account of his expedition, entitled Exploring Unknown Corners of the 'Hermit Kingdom'.

War, Strategy, and Military Effectiveness-Williamson Murray 2011-09-30 This collection of articles represents Professor Williamson Murray's efforts to elucidate the role that history should play in thinking about both the present and the future. They reflect three disparate themes in Professor Murray's work: his deep fascination with history and those who have acted in the past; his fascination with the similarities in human behavior between the past and the present; and his belief that the study of military and strategic history can be of real use to those who will confront the daunting problems of war and peace in the twenty-first century. The first group of essays addresses the relevance of history to an understanding of the present and to an understanding of the possibilities of the future. The second addresses the possible direct uses of history to think through the problems involved in the creation of effective military institutions. The final group represents historical case studies that serve to illuminate the present.

Mycotoxins and Food Safety-Jonathan W. DeVries 2012-12-06 Mycotoxins, from the Greek "mukes" referring to fungi or slime molds and toxin from the Latin "toxicum" referencing a poison for arrows, have earned their reputation for being potentially deleterious to the health and well being of a consuming organism, whether it be animal or human. Unfortunately, mycotoxins are a ubiquitous factor in the natural life cycle of food producing plants. As such, control of the potential impact of mycotoxins on food safety relies heavily upon accurate analysis and surveys followed by commodity segregation and restricted use or decontamination through processing. The purpose of this book is to provide the most comprehensive and current information on the topic of mycotoxins and assuring food safety. Chapters represented in the book reflect such diverse topics ranging from occurrence and impact, analysis, reduction through processing and plant breeding, toxicology and safety assessments to regulatory perspectives. Authors represent a range of international perspectives.

The South Carolina Diary of Reverend Archibald Simpson: May 1754-April 1770-Archibald Simpson 2012-03-01 The South Carolina Diary of Reverend Archibald Simpson, edited by Peter N. Moore, is a two-volume annotated edition of selections from the journals of a noted eighteenth-century lowcountry Presbyterian pastor and planter. Simpson's manuscript journals, consisting of approximately two thousand eight-hundred pages of text, span from youthful entries in 1748 until 1784, and chronicle the religious, social, and cultural milieu of Scotland and colonial America during the revolutionary era. Preserved since 1854 by the Charleston Library Society, Simpson's firsthand accounts, augmented here with Moore's introduction and annotations, offer an insider's vantage point on this transformative period in colonial southern history. Born in Glasgow, Scotland, around 1734, Simpson appeared in South Carolina in 1754 and was a Presbyterian pastor in the lowcountry for almost two decades before returning to Great Britain in 1772. A meticulous and detailed writer, Simpson filled his journals with geographical information, local history, and commentaries on his South Carolina community and its inhabitants. Part 1 includes selections from Simpson's journals from 1754 through 1770. Moore's introduction provides an account of Simpson's experiences in colonial South Carolina, religious meditations, and observations on his personal spiritual failings and local evangelical pastors. Simpson also remarked on larger issues of the colonial period, including the revolutionary sentiment in America and the imperial crisis of Great Britain.
