Spinal Conditions in the Athlete-Wellington K. Hsu 2019-10-10 This concise, user-friendly guide brings together the strongest available evidence with expert recommendations to provide insight into the management of injuries to the athlete's spine, including controversies unique to this area. Divided into three thematic sections, this information will prove invaluable, as many of the real-world questions surrounding care do not have distinct and obvious answers. Considerations for team physician management comprises part I, including on-field assessment of spine injuries and concussion, rehabilitation and return to play, and complications and post-concussion sequelae. The second and third sections discuss injuries to the cervical spine and the thoracolumbar spine, respectively, describing injury evaluation, management, and outcomes in the elite athlete. Spine conditions have been studied extensively in the general population; however, applying this data to the elite athlete is controversial. Numerous external variables make performance of well-designed clinical trials challenging in this population, and consequently evidence-based recommendations are lacking for the athlete's spine. Practical and engaging, Spinal Conditions in the Athlete will be an excellent resource for sports medicine specialists, orthopedic and neurosurgeons, and any clinician treating the active patient.

Transport Systems Telematics-Jerzy Mikulski 2010-10-06 The idea of telematics appeared more than a decade ago and it is possible to define it, in a general and simple way, as a communication system for collecting, processing and distributing information. The transport services market is definitely the most important area for telematic applications. Transport-telematics issues constitute a field of knowledge of transport that integrates information technology and telecommunications in applications for managing and controlling traffic in transport systems, stimulating technical and organizational activities that ensure improved effectiveness and safe operation of such systems. Integrated and cooperating telematic applications constitute intelligent transport systems. The basis of such systems is to efficiently collect and process information and to manage its flow within the system. This enables supplying information from almost all areas of transport activities in real time. Intelligent transport--supported by a number of integrated telecommunications, IT measurement and control engineering solutions, and by appropriate tools and software--comprises telematic applications. They have an extensive range of use in many areas of transport, allowing the integration of the means and types of transport, including its infrastructure, business organization and management processes. This monograph is a collection of selected papers presented at the jubilee transport telematics conference, TST 2010, and is the result of the work of many scientists associated with this area of knowledge and who had spent years with the conference.

The Invention of the Automobile - (Karl Benz and Gottlieb Daimler)- St. John C. Nixon 2016-02-15 " ... My excuse for writing this book is a desire to ventilate certain facts in relation to the early work of Karl Benz and

Gottlieb Daimler of which the public is largely ignorant. Among those who have taken the trouble to investigate the early days of the motor movement, there is a certain amount of controversy as to who invented the motor vehicle, although this question has not, at the moment, extended to the general public. Inevitably it will do so, if the prevailing interest increases, in which event, it is hoped that this book will prove useful, for all the dates and facts, etc., have been fully authenticated. There are, however, several to whom I must express my sincere gratitude for the assistance they have given me. Herr Rudolf Caracciola, the winner, during the 1935 season of motor racing, of the Grand Prix of France, Belgium, Switzerland, Spain, and Tripoli, to say nothing of other triumphs, and therefore the Champion of Europe, has most kindly written a preface after reading through the manuscript. The Daimler-Benz Aktiengesellschaft of Germany has been indefatigable in providing me with material in regard to certain facts connected with the early experiments of both Benz and Daimler. Mr. Frederick R. Simms, too, has spared no effort to help me with some of the inner details of Daimler's engineering career." (ST. John C. Nixon - September, 1936)
