Readers become fully engaged with the historical developments and the specific socioeconomic, sociocultural, and sociopsychological forces involved in the dynamics that shaped contemporary Chicano life. Considered a pioneering achievement when first published, *From Indians to Chicanos* continues to offer readers an informed and penetrating approach to the history of Chicano development. Moreover, a new chapter updates discussions of immigration, institutional discrimination, the Mexicanization of the Chicano population, and issues of gender, labor, and education.

**Fish Energetics**-Peter Tytler 2012-12-06 It is almost thirty years since Professor G. G. Winberg established the basis for experimental studies in fish energetics with the publication of his monograph, *Rate of Metabolism and Food Requirements of Fishes*. His ultimate aim was to develop a scientific approach to fish culture and management, and the immense volume of literature generated in the ensuing years has been mainly in response to the demand for information from a rapidly expanding, world-wide aquaculture industry and to the shortcomings of contemporary practices in fisheries management.

The purpose of this book is not to review this literature comprehensively, but, assuming an informed readership, to focus attention on topics in which new knowledge and theory are beginning to be applied in practice. Most emphasis has been placed on food; feeding; production (growth and reproduction) and energy budgeting, as these have most influence on the development of fish culture. Some chapters offer practical advice for the selection of methods, and warn of pitfalls in previous approaches. In others the influence of new theory on the interpretation of studies in fish energetics is discussed in the context of resource allocation and adaptation. We hope that the scope of material presented here will have sufficient interest and value to help significantly to fulfil Winberg's original objectives.

**Friendship and Social Interaction-**Valerian J. Derlega 2012-12-06 A neglected topic in the field of personal relationships has been the study of friendships. Social psychologists have studied how and why individuals are attracted to one another and the processes of interaction during initial encounters, but they have not paid much attention to ongoing friendships. A major goal of the present volume is to develop theories and integrate research on the development and maintenance of friendships. Another major goal is to build bridges between social psychologists

and other social scientists by presenting an interdisciplinary approach. Although a majority of the contributors are social psychologists, other authors include sociologists as well as developmental, personality, and clinical psychologists. The chapters also present research on friendship based on a wide range of research methodologies, including laboratory research as well as longitudinal, naturalistic, and clinical studies. Hence, the book incorporates a variety of conceptual and methodological approaches that should contribute to a cross-fertilization of ideas among disciplines. The first chapter, by Barbara A. Winstead and Valerian J. Derlega, provides an overview of theory and research on friendship. The second chapter, by Daniel Perlman and Beverley Fehr, provides a summary and conceptual critique of social psychological theories of social attraction that are relevant to the study of friendship. Adopting a developmental approach, Duane Buhrmester and Wyndol Furman, in Chapter 3, demonstrate the particular importance of friendship during middle childhood and adolescence in fulfilling interpersonal needs.
